

CEU Plan: Back by Popular Demand - Gauging Education in the Utility Industry

Back-by-Popular Demand... our presentation concerning your operator workforce, their education, CEUs and the evaluation of training programs. I have received several inquiries concerning plans to update current programs, with new administrators in state programs desiring suggestions that might be helpful in making long term plans, training on conforming to principles philosophies state rules and regulations and asking 'What constitutes a CEU?' We produced a short thirty-minute video clip illustrating some of our approaches to operator education, our orientation for new users of our program and suggestions and ideas to consider, in updating your OCP programs. The presentation and link are available online 24/7 to suit your time and schedule:
